

Your **Fifth Step** in Coordinated, **Defense-Oriented** approach to security

Security Auditing is a crucial discipline in your effort to stay ahead of the competition. Our Information security specialists and auditors will visit your premises and audit your security posture, based on industry wide Information Security and Audit standards. We produce what is called a "Security Baseline", which will drive your Security Program efforts.

Any physical, network and privacy related deficiencies and weaknesses are identified and confidentially protected. Our Security Auditing consultants will proceed to make recommendations that will address all critical security vulnerabilities, potential areas of improvement and suggest nice-to-have security measures. We will help you implement security measures, strengthening your security posture.
